SUMMARY

Recent M.Eng. graduate in Computer Science from UConn with hands-on experience building end-to-end ML pipelines, training predictive models, and deploying data-driven applications. Skilled in Python, SQL, and full-stack data workflows. Databricks Generative AI certified. Actively seeking full-time roles in ML/AI or Data Science/Engineering.

TECHNICAL SKILLS

ML / AI: PyTorch · TensorFlow · Scikit-learn · XGBoost · Multi-Modal Deep Learning · Time Series Analysis · Feature Engineering · Model Explainability (SHAP, Grad-CAM) · End-to-End Model Deployment

Languages & Data: Python (NumPy, Pandas, Matplotlib, Seaborn) · SQL · Git

MLOps & Infrastructure: Streamlit · REST APIs · Docker · GitHub Actions · Databricks (Generative AI certified)

Databases & Visualization: MySQL · PostgreSQL · MongoDB · Power BI · Tableau

EDUCATION

M.Eng. Computer Science & Engineering - University of Connecticut, Storrs, CT

Aug 2024 – May 2026

Relevant Coursework: Machine Learning, Deep Learning, Data Mining, Cloud Computing

B.Eng. Computer Science & Engineering - Gujarat Technological University, India

Jul 2019 – Jun 2023

PROJECTS

Explainable Multi-Modal Deep Learning - UConn Capstone

PyTorch · SHAP · Grad-CAM · NumPy · Pandas

- Designed and benchmarked single- vs. multi-modal deep learning architectures fusing heterogeneous sensor and image data; multi-modal fusion outperformed single-modality baselines by 14% on held-out classification tasks.
- Stress-tested models under 10–30% input noise, retaining 18% higher accuracy than single-modal baseline; profiled inference latency against deployment SLA targets.
- Generated SHAP breakdowns and Grad-CAM heatmaps per modality to surface which sensor channels drove each prediction, enabling stakeholders to validate model decisions without reading code.

Insurance Risk Advisor - End-to-End Deployed ML App

Python · Scikit-learn · Streamlit · Pandas · XGBoost

- Trained a multi-class risk-classification model on 50K+ records achieving 87% validation accuracy vs. a 72% logistic-regression baseline; serialized full inference pipeline for one-command retraining.
- Shipped a Streamlit app that scores new profiles in real time from form inputs, eliminating manual review on low-complexity cases.

Customer & Service Analytics Platform Full-Stack

Python · MongoDB · Express.js · React.js · Node.js · Cypress

- Built a full-stack MERN marketplace; queried aggregated usage logs to surface top-3 demand categories, directly informing the next sprint's product roadmap.

RAG Chatbot - End-to-End Deployed AI App

Python · LangChain · ChromaDB · Groq (Llama 3.1) · HuggingFace · Streamlit

- Built an end-to-end Retrieval-Augmented Generation chatbot that answers questions grounded in user-uploaded PDF documents with source page citations.
- Implemented document ingestion pipeline using PyPDFLoader and RecursiveCharacterTextSplitter to chunk, embed, and store documents in ChromaDB vector database.
- Integrated Groq (Llama 3.1 8B) with a custom prompt template to prevent hallucination and maintain multi-turn memory; deployed publicly on Hugging Face Spaces.

EXPERIENCE

Software Developer Intern | Sourcvd Technologies — Ahmedabad, India

Jul 2023 – May 2024

- Built REST API-integrated web applications; traced data flow from backend endpoints to UI state, catching 3 classes of serialization bugs causing silent data loss.
- Reduced reported UI defect rate by 40% over two release cycles by introducing a pre-merge browser matrix checklist across Chrome, Firefox, and Edge.

MERN Stack Developer Intern | Arth Infosoft Pvt. Ltd. — Ahmedabad, India

Jan 2023 – May 2023

- Designed MongoDB schemas with embedded vs. referenced document strategies to optimize query performance; implemented REST API endpoints consumed by the React front end.

CERTIFICATIONS & ADDITIONAL

- Databricks: Generative AI Fundamentals (2024) · Fundamentals Accreditation (Feb 2026)
- Student Manager, UConn Dining Services (2024–26): scheduling, payroll, and onboarding for 40+ student employees.
